WHAT IS COUNTNUTRI

Food tracking without the tedious part.

Most people quit calorie counting for one reason: the logging is exhausting. Searching databases, guessing portions and typing every ingredient takes longer than eating the meal.

CountNutri removes that friction completely. You photograph your plate and artificial intelligence identifies the dishes, estimates the portions and calculates calories and macros in seconds — with every result cross-checked against USDA FoodData Central.

It works on Android and on the web — one account, synced across both.

1 photo

replaces a full manual food-diary entry

Seconds

from snapshot to calories & macros

USDA

nutrition data behind every estimate

HOW IT WORKS

Three steps. That's the whole routine.

1

Snap

Photograph your plate from slightly above — home-cooked, restaurant or packaged food.

2

Analyze

The AI identifies every dish on the plate, estimates portions and calculates the nutrition.

3

Track

Adjust anything in a tap and save. Your diary, goals and trends update instantly.

BUILT FOR REAL FOOD

The tracker that understands rice and curry.

Generic calorie apps fail at mixed, home-cooked dishes. CountNutri is tuned to recognise South Asian cooking — including curries that combine several ingredients — and the cooking styles that change the calories, from tempering to coconut-milk gravies. Western and world cuisine are handled just as well.

WHAT YOU GET

Everything you need to eat with intention.

**AI Food Scanner**

Snap one photo and get an instant calorie and macro breakdown. Identifies several foods on a single plate — no barcode required.

**USDA-Verified Data**

Every estimate is cross-checked against USDA FoodData Central, so the numbers are grounded in a trusted nutrition database.

**AI Nutrition Coach**

Ask any nutrition or diet question and get a personalised answer, plus meal ideas tailored to your goals and cuisine.

**FREE****Water Tracking**

Set a daily hydration goal and get smart reminders through the day. Included free on every plan, always.

**Diary & Analytics**

Your food journal builds itself from your scans. Review daily, weekly and monthly trends with full photo history.

**Goals & Progress**

Set calorie, protein, carb or fat targets. Progress updates automatically from your scans — with streaks to keep you going.

SUBSCRIPTIONS

Simple, honest pricing.

Start with a free trial and use CountNutri on your own meals before paying anything. Upgrade when it has earned a place in your routine.

FREE TRIAL

\$0

7 days

Try photo tracking on your own meals, no commitment.

- ✓ 1 scan per day
- ✓ Standard AI model
- ✓ AI Nutrition Coach
- ✓ Water tracking
- ✓ Food diary & goals

PREMIUM

\$9.99

per month

For everyday tracking across every meal of the day.

- ✓ 6 scans per day
- ✓ Premium AI model
- ✓ Recipe recommendations
- ✓ Data export
- ✓ Priority support

BEST VALUE

ULTRA

\$99.99

per year

Everything in Premium — about two months free versus paying monthly.

- ✓ 6 scans per day
- ✓ Premium AI model
- ✓ Recipe recommendations
- ✓ Data export
- ✓ Priority support

INCLUDED ON EVERY PLAN

- AI Nutrition Coach
- Android app and web dashboard
- Automatic food diary & history
- Water tracking with reminders
- USDA cross-checked nutrition
- Private, account-only data

A note on honesty: an AI photo estimate is an estimate, not a laboratory measurement. It is designed to make consistent daily tracking realistic — and consistency is what actually drives results.

THE MOBILE APP

CountNutri in your pocket.

The Android app is the fastest way to build the habit — scan at the table, check your remaining calories, chat with the AI coach and log your water, all from your phone. Everything syncs with the web dashboard automatically.

- 1 Install the app or open countnutri.com
- 2 Sign in with Google or email
- 3 Set your goal and scan your first meal

**Download on Google Play**

Scan with your phone camera to install the Android app

**Use it on the web**

Scan to open countnutri.com and start in your browser
